

Principles of Digital Communication Systems and Computer Networks

Comprehensive Coverage of Digital Communications,
Data Communication Protocols and Mobile Computing

Dr. K. V. K. K. Prasad

19-A, Ansari Road, Daryaganj,
New Delhi-110002

Contents

Part 1

Digital Communication Systems

Chapter 1

Basics of Communication Systems	27
1.1 Basic Telecommunication System	27
1.2 Types of Communication	31
1.3 Transmission Impairments	32
1.4 Analog versus Digital Transmission	33
Summary	34
References	35
Questions	35
Exercise	35
Project	35

Chapter 2

Information Theory	36
2.1 Requirements of a Communication System	36
2.2 Entropy of an Information Source	39
2.3 Channel Capacity	40
2.4 Shannon's Theorems	41
2.4.1 Source Coding Theorem	42
2.4.2 Channel Coding Theorem	43
Summary	44
References	44
Questions	45
Exercise	45
Projects	45

Chapter 3

Transmission Media	46
3.1 Twisted Pair	46
3.2 Coaxial Cable	47
3.3 Optical fiber	48

3.4 Terrestrial Radio	49
3.4.1 Radio Spectrum	51
3.5 Satellite Radio	53
3.6 Radio Spectrum Management	55
3.6.1 Spectrum Management Activities	56
3.6.2 Cost of Spectrum	57
Summary	57
References	58
Questions	58
Exercise	58
Projects	58

Chapter 4

Coding of Text, Voice, Image and Video Signals	59
4.1 Text Messages	59
4.2 Voice	61
4.2.1 Waveform Coding	62
4.2.2 Vocoding	65
4.3 Image	67
4.4 Video	68
Summary	70
References	71
Questions	71
Exercise	71
Projects	72

Chapter 5

Error Detection and Correction	73
5.1 Need for Error Detection and Correction	73
5.2 Error Detection	75
5.2.1 Parity	75
5.2.2 Block Codes	75
5.3 Error Correction	81
Summary	82
References	82
Questions	82
Exercise	82
Projects	83

Chapter 6

Digital Encoding	84
6.1 Requirements for Digital Encoding	84
6.2 Categories of Encoding Schemes	85
6.3 Non Return to Zero Invertive (NRZ-I)	85
6.4 Non-Return to Zero Level (NRZ-L)	86
6.5 Manchester	86
6.6 RS232 Standard	87
6.7 Bipolar Alternate Mark Inversion (Bipolar AMI)	87
6.8 High-Density Bipolar 3 (HDB3)	87
Summary	88
References	88
Questions	89
Exercise	89
Project	89

Chapter 7

Multiplexing	90
7.1 Multiplexing and De-multiplexing	90
7.2 Frequency Division Multiplexing	91
7.3 Time Division Multiplexing	92
7.3.1 Statistical Time Division Multiplexing	94
7.4 Wave Division Multiplexing	95
7.4.1 Dense Wave Division Multiplexing	95
Summary	96
References	96
Questions	96
Exercise	96
Projects	97

Chapter 8

Multiple Access	98
8.1 Frequency Division Multiple Access	98
8.2 Space Division Multiple Access	99
8.3 Time Division Multiple Access	100
8.3.1 Time Division Multiple Access–Frequency Division Duplex (TDMA-FDD)	102
8.3.2 Time Division Multiple Access–Time Division Duplex (TDMA-TDD)	103
8.4 FDMA/TDMA	104

10

8.5 Code Division Multiple Access	105
8.5.1 Frequency Hopping (FH)	105
8.5.2 Direct Sequence CDMA	107
8.6 Orthogonal Frequency Division Multiplexing (OFDM)	108
8.7 Carrier Sense Multiple Access (CSMA)	108
Summary	109
References	109
Questions	110
Exercise	110
Projects	111

Chapter 9

Carrier Modulation	112
9.1 What is Modulation?	112
9.2 Why Modulation?	113
9.3 Types of Modulations	114
9.4 Comparison of Different Modulation Techniques	115
9.5 Analog Modulation Techniques	115
9.5.1 Amplitude Modulation	115
9.5.2 Frequency Modulation	117
9.5.3 Phase Modulation	118
9.6 Digital Modulation Techniques	118
9.6.1 Amplitude Shift Keying	120
9.6.2 Frequency Shift Keying	120
9.6.3 Phase Shift Keying	120
Summary	121
References	121
Questions	122
Exercise	122
Projects	122

Chapter 10

Issues in Communication System Design	123
10.1 Data Rates	124
10.2 Error Detection and Correction	125
10.3 Modulation Techniques	125
10.4 Performance Criteria	127
10.5 Security Issues	127
10.6 Radio System Design Issues	128

<i>Contents</i>	11
-----------------	-----------

10.7 Telecommunication Standards	129
10.8 Cost	130
Summary	130
References	130
Questions	131
Exercise	131
Projects	131

Chapter 11

Public Switched Telephone Network	133
11.1 PSTN Network Elements	133
11.1.1 The subscriber terminal	134
11.1.2 Local loop	135
11.1.3 Switch	135
11.1.4 Trunks	136
11.2 Local Loop	137
11.3 Switching Concepts	138
11.4 Trunking Systems	140
11.5 Signaling	142
Summary	143
References	143
Questions	143
Exercise	144
Projects	144

Chapter 12

Terrestrial Radio Communication Systems	145
12.1 Advantages of Terrestrial Radio Systems	145
12.2 Radio Communication System	146
12.3 Broadcasting Systems	148
12.3.1 Audio Broadcasting	148
12.3.2 TV Broadcasting	148
12.4 Wireless Local Loops	149
12.4.1 Shared Radio Systems	151
12.4.2 Digital Local Loops	152
12.5 Cordless Telephony	155
12.5.1 Digital Enhanced Cordless Telecommunications (DECT)	155
12.6 Trunked Radio Systems	159
12.6.1 TETRA	159

12

Summary	161
References	161
Questions	161
Exercise	162
Projects	162

Chapter 13

Satellite Communication Systems	163
13.1 Applications of Satellites	163
13.2 Architecture of a Satellite Communication System.....	164
13.2.1 Frequencies of Operation	166
13.3 Problems in Satellite Communication	166
13.4 Multiple Access Techniques	167
13.4.1 DAMA-SCPC	168
13.4.2 TDM-SCPC	170
13.4.3 TDMA	172
13.5 A Representative Network.....	173
Summary	174
References	175
Questions	175
Exercise	175
Projects	175

Chapter 14

Optical Fiber Communication Systems	176
14.1 Evolution of Optical Fiber Communication	176
14.1.1 Multi-mode Optical Fiber Communication	177
14.1.2 Single-mode Optical Fiber Communication	177
14.1.3 Wave Division Multiplexing Systems	178
14.2 Optical Networks	180
14.2.1 SONET/SDH	180
14.2.2 Optical Transport Networks	182
14.3 Broadband Services to the Home/Office	183
Summary	184
References	185
Questions	185
Exercise	185
Projects	185

Part 2

Data Communication Protocols and Computer Networking

Chapter 15

Issues in Computer Networking	189
15.1 The Beginning of the Internet	189
15.2 Services and Applications	191
15.3 Packet Switching Concepts	191
15.3.1 Virtual Circuit	193
15.3.2 Datagram Service	194
15.3.3 Source Routing	195
15.4 Issues in Computer Networking	195
15.5 Need for Layered Approach and Protocol Standards	198
Summary	200
References	200
Questions	201
Exercise	201
Projects	201

Chapter 16

ISO/OSI Protocol Architecture	202
16.1 OSI Reference Model	202
16.2 Physical Layer	205
16.3 Datalink Layer	206
16.3.1 High-Level Data Link Control (HDLC)	206
16.4 Network Layer	209
16.5 Transport Layer	209
16.6 Session Layer	210
16.7 Presentation Layer	210
16.8 Application Layer	210
Summary	211
References	212
Questions	212
Exercise	212
Projects	212

Chapter 17

Local Area Networks	213
17.1 The Ethernet LAN	213
17.1.1 LAN Protocol Layers	215
17.1.2 CSMA/CD protocol	216
17.1.3 Ethernet Addresses	216
17.1.4 Ethernet Frame Format	217
17.2 LAN Transmission Media	218
17.3 LAN Topologies	218
17.4 Medium Access Control Protocols in LANs	220
17.5 LAN Standards	221
17.5.1 IEEE 802.2 standard	221
17.5.2 IEEE 802.3 Standard	222
17.5.3 IEEE 802.4 Standard	223
17.5.4 IEEE 802.5 Standard	223
17.5.5 IEEE 802.12 Standard	224
17.5.6 FDDILAN	224
17.6 LAN Bridge	225
17.7 Wireless LANs	225
17.7.1 IEEE 802.11 Family Standards	227
17.7.2 Medium Access Control	228
17.7.3 WiFi	229
17.7.4 Mobile IP	230
17.7.5 IEEE 802.15.3 Standard	231
17.7.6 HiperLAN2	231
Summary	232
References	232
Questions	233
Exercise	233
Projects	233

Chapter 18

Wide Area Networks and X.25 Protocols	234
18.1 Issues in Wide Area Networking	234
18.2 Overview of X.25	235
18.3 A Satellite-based X.25 Network	239
18.4 Addressing in X.25 Networks	240
Summary	241
References	242

<i>Contents</i>	15
Questions	242
Exercise	242
Projects	242

Chapter 19

Internetworking	243
19.1 Issues in Internetworking	243
19.2 The Internet—The Global Network of Networks	248
Summary	248
References	248
Questions	249
Exercise	249
Projects	249

Chapter 20

TCP/IP Protocol Suite	250
20.1 TCP/IP Protocol Suite	250
20.2 Operation of TCP and IP	253
20.3 Internet Protocol (IP)	254
20.4 Transmission Control Protocol (TCP)	255
20.4.1 Flow Control and Acknowledgements	256
20.4.2 Congestion Control	258
20.5 User Datagram Protocol (UDP)	258
20.6 TCP/IP over Satellite Links	259
20.7 Inter-Planetary Internet (IPN)	259
Summary	261
References	262
Questions	262
Exercise	262
Projects	263

Chapter 21

Internet Protocol (IP)	264
21.1 Overview of Internet Protocol	264
21.2 Internet Addressing Scheme	265
21.2.1 Dotted Decimal Notation	267
21.3 Address Resolution Protocol	267
21.4 Reverse Address Resolution Protocol	268
21.5 IP Datagram Format	268

16

21.6 Subnet Addressing	270
21.7 Supernet Addressing	271
21.8 Limitations of IP version 4	272
21.9 Features of IP version 6	273
21.9.1 IPv6 Packet Format	273
21.10 Routing Protocols	276
21.10.1 Direct Delivery	277
21.10.2 Indirect Delivery	277
21.11 Autonomous System	278
21.12 Routing within Autonomous Systems	279
21.12.1 Open Shortest Path First (OSPF)	279
21.12.2 Flooding	279
21.13 Routing between Autonomous Systems	280
21.13.1 Exterior Gateway Protocol	280
21.13.2 Border Gateway Protocol	282
21.14 Internet Control Message Protocol	283
Summary	285
References	285
Questions	285
Exercise	286
Projects	286

Chapter 22

Transport Layer Protocols: TCP and UDP	287
22.1 Services of the Transport Layer	287
22.2 Transmission Control Protocol	289
22.2.1 Virtual Circuit Connection	290
22.2.2 TCP Segment Format	291
22.2.3 TCP Mechanism	292
22.3 User Datagram Protocol	294
22.4 Transport Layer Security	296
Summary	297
References	297
Questions	298
Exercise	298
Projects	298

Chapter 23

Distributed Applications	299
23.1 Simple Mail Transfer Protocol (SMTP)	299

23.2 Multi-Purpose Internet Mail Extension (MIME) 303

23.3 Hyper Text Transfer Protocol (HTTP) 304

23.4 Lightweight Directory Access Protocol (LDAP) 308

23.5 Simple Network Management Protocol (SNMP) 309

 Summary 311

 References 311

 Questions 312

 Exercise 312

 Projects 312

Chapter 24

The Wired Internet 313

24.1 Internet Applications 313

24.2 Internet Architecture 316

24.3 Domain Name Service 317

 24.3.1 Domain Name Servers 318

24.4 Security Issues in the Internet 320

 24.4.1 RADIUS Server 320

 24.4.2 Firewalls 321

24.5 Internet Access Products 321

24.6 Virtual Private Networks 322

 24.6.1 VPN Security Requirements 323

 24.6.2 VPN Architecture and Protocols 324

 Summary 325

Chapter 27

Integrated Services Digital Network	352
27.1 Objectives of ISDN	352
27.2 Principles of ISDN	353
27.3 ISDN Architecture	355
27.3.1 Reference Points	356
27.3.2 Narrowband ISDN Channels	356
27.4 ISDN Standards.....	358
27.5 ISDN Protocol Architecture	359
27.6 ISDN Connections	361
27.7 Broadband ISDN	362
References	362
Questions	362
Exercises	362
Projects	363

Chapter 28

Frame Relay	364
28.1 Advantages of Frame Relay.....	364
28.2 Frame Relay Network	365
28.3 Frame Format	367

28.3.1 Frame Relay Header	368
28.4 Congestion control.....	369
28.4.1 Committed Information Rate	370
28.5 Local Management Interface	370
28.6 Frame Relay Standards.....	370
28.7 Frame Relay versus X.25	370
28.8 Representative Frame Relay Networks	371
Summary	373
References	373
Questions	373
Exercise	374
Projects	374

Chapter 29

Asynchronous Transfer Mode	375
29.1 Concepts of ATM	375
29.2 ATM Logical Connections	377
29.3 Call Establishment in ATM Networks	379
29.4 ATM Protocol Architecture.....	381
29.5 ATM Cell Structure	381
29.6 Transmission of ATM Cells.....	384
29.7 ATM for Multimedia	384
Summary	385
References	385
Questionss	385
Exercise	386
Projects	386

Part 3

Mobile Computing and Convergence Technologies

Chapter 30

Radio Paging	390
30.1 Paging System Architecture and Operation	390
30.2 Types of Pagers	392
30.3 Frequencies of Operation	392
30.4 Paging Protocols	393

30.5 Advances in Radio Paging	393
Summary	394
References	394
Questions	395
Exercise	395
Projects	395

Chapter 31

Cellular Mobile Communication Systems	396
31.1 Principles of Cellular Mobile Communications.....	396
31.1.1 Single-Cell Systems	397
31.1.2 Multi-cell Systems	398
31.2 Cellular System Design Issues.....	399
31.3 Mobile Communications Standards	400
31.4 GSM Architecture	401
31.4.1 Salient Features of GSM.....	401
31.4.2 GSM Services	402
31.4.3 GSM System Architecture	403
31.4.4 GSM Network Areas	409
31.4.5 GSM Operation	410
31.5 Enhancements of GSM Standards	411
31.5.1 GSM Phase 2	411
31.5.2 Speech Quality Improvements	411
31.5.3 Enhanced Data Services	411
31.6 Mobile Satellite Systems	412
31.6.1 Iridium	412
31.6.2 Globalstar	413
31.6.3 ICO/Teledesic	414
Summary	414
References	415
Questions	415
Exercise	416
Projects	416

Chapter 32

Global Positioning System	417
32.1 GPS Architecture.....	417
32.2 GPS Receiver	419
32.3 Differential GPS	420

<i>Contents</i>	21
-----------------	-----------

32.4 Applications of GPS	421
32.5 Commercial GPS Receivers	421
32.6 Developing Applications using GPS Receivers	422
Summary	423
References	423
Questions	424
Exercise	424
Projects	424

Chapter 33

Wireless Internet	425
33.1 Wireless Access to Internet	425
33.1.1 Challenges in Wireless Access to the Internet	426
33.2 Wireless Internet Roadmap: Generations of Wireless Networks	427
33.2.1 Wireless Access Devices	429
33.3 Wireless Internet Applications	430
33.3.1 Pull Model and Push Model	430
33.3.2 Location-based Services	431
33.4 Wireless Application Protocol	432
33.4.1 WAP Overview	432
33.4.2 Wireless Application Environment	434
33.4.3 WAP Architecture	435
33.4.4 Evolution of WAP	437
33.5 2.5G Wireless Networks	439
33.6 3rd Generation (3G) Wireless Networks	442
33.6.1 3G Standardization Activities	443
Summary	445
References	445
Questions	446
Exercise	447
Projects	447

Chapter 34

Multimedia Communication over IP Networks	448
34.1 IP Networks and Multimedia Communication	448
34.1.1 Limitations of IP Networks	449
34.2 Architecture for Multimedia Communications over IP Networks	450
34.3 Protocol Standards for Multimedia Communications over IP Networks	451
34.3.1 Call Models	454

34.4 Voice and Video over IP	455
34.4.1 Applications of Voice over IP	456
34.4.2 Issues in Voice and Video over IP	456
34.4.3 Video over IP	458
34.4.4 Real Time Transport Protocol (RTP)	459
34.4.5 Real Time Control Protocol	460
34.5 Fax over IP	462
34.5.1 Fax Transmission over PSTN	463
34.5.2 Fax over IP	464
34.6 Cisco's Architecture for Voice, Video and Integrated Data (AVVID)	465
34.7 Merger of Dotcom and Telecom or Death of PSTN?	467
34.8 Java Media Framework	468
Summary	469
References	470

Chapter 35

Computer Telephony Integration and Unified Messaging	472
35.1 Need for CTI	472
35.2 Technology Ingredients of CTI	473
35.3 Text-to-Speech Conversion	473
35.3.1 Machine Representation of Text	475
35.3.2 Transliteration	475
35.3.3 Speech Synthesis	476
35.3.4 Issues in Text-to-Speech Conversion System Design	478
35.4 Interactive Voice Response Systems	479
35.4.1 How an IVR System Works?	479
35.4.2 IVR System Architecture	481
35.4.3 IVR Application Design Issues	482
35.5 Automatic Speech Recognition	483
35.5.1 Speech Recognition Methodology	484
35.5.2 Categories of Speech Recognition Systems	488
35.5.3 Applications of Speech Recognition Technology	490
35.6 Call Centers	490
35.6.1 Call Center Applications	491
35.6.2 Call Center Architecture	491
35.6.3 Internet-enabled Call Centers	492

35.7 Unified Messaging	492
35.7.1 Unification of Messaging Systems	493
35.7.2 Applications of Unified Messaging	494
35.8 VoiceXML	495
Summary	498
References	499
Questions	500
Exercise	501

Chapter 38

Information Security	531
38.1 Information Leaks	531
38.2 Surveillance	532

38.2.1 Surveillance of Voice/Fax Communication	533
38.2.2 Surveillance of Data Applications	534
38.3 The Dangers of Mobile Phones	534
38.4 Cryptography	535
38.4.1 Secret Key Algorithms	536
38.4.2 Public Key Algorithms	538
38.5 Steganography	539
38.5.1 Digital Watermarking	541
38.5.2 Secure Multimedia Communication	541
Summary	543
References	544
Questions	544
Exercise	544
Projects	545

Chapter 39

Futuristic Technologies and Applications	546
39.1 Evolution of the Present Telecommunication Network Architecture	546
39.2 Convergence of Networks	548
39.3 Emerging Applications	549
39.4 The Challenges	551
Summary	552
References	552
