<i>about this book</i>	<i>xx</i>
<i>introduction: a tight coupling case study</i>	<i>xxiv</i>

## ***Part 1 Understanding the technology of enterprise SOA 1***

<b><i>1 The goal of loose coupling</i></b>	<b><i>3</i></b>
1.1 In the beginning, there was distributed computing	5
What is distributed computing?	5
1.2 The two problems of interoperability	7
Proprietary standards	8
♦ Tight coupling	8
1.3 The goal: simple and inexpensive interoperability	11
The impact of object-oriented software	12
♦ Client-server	14
Setting the standards	15
♦ Early loose coupling	16
1.4 Real loose coupling	17
Hardware, software, and network transparency	17
♦ XML	18
The coalescing of key enabling factors	21
1.5 Summary	22
<b><i>2 Web services overview</i></b>	<b><i>23</i></b>
2.1 When you look up my auto policy	23
Call and response	24
How the CSR would consume web services	26
2.2 The technology it's based on	27
SOAP	27
♦ WSDL	28
♦ UDDI	29

2.3	Characteristics of web services	30
	Loose coupling	30 ♦ Network transparency 30
2.4	Birthing a web service	32
	Exposing web services	33 ♦ New web services 34
	Specific technologies	34
2.5	The savvy manager cautions: standards	35
2.6	Summary	35
<b>3</b>	<b><i>What web services can do</i></b>	<b>37</b>
3.1	Technology with potential	37
3.2	Invoking remote procedures	38
3.3	Exchanging data	39
3.4	Impact on EDI	39
3.5	Communicating between multivendor systems	40
3.6	Interacting interdepartmentally and beyond	41
3.7	Integrating applications (EAI)	43
3.8	The savvy manager cautions: the limits of web services	44
	Replacing legacy systems	45 ♦ Operating securely or reliably on their own 46 ♦ Performance 46 ♦ It's not always SOAP, either 46
3.9	Summary	47
<b>4</b>	<b><i>What is SOA?</i></b>	<b>49</b>
4.1	Enterprise architecture: the big picture	50
4.2	The service-oriented architecture	51
	Struggling to adapt in today's enterprise architecture	52
	SOA solutions: theory and practice	55
4.3	The savvy manager cautions: EA is a process, not a dogma	57
4.4	Summary	57
<b>5</b>	<b><i>SOA for enterprise application integration</i></b>	<b>58</b>
5.1	Is Titan happy with its EAI?	58
	First, the truth: EAI is broken	59 ♦ Islands of integration 59
	Other EAI challenges	62
5.2	How web services can simplify EAI	62
5.3	Web services in portals	63
5.4	Web services in software development	66

5.5	The savvy manager cautions: limitations of web services in EAI	69
	Speed and reliability	69 ♦ Security 70
	Political issues raised by web services EAI	71
5.6	Summary	72
6	<i>SOA for B2B commerce</i>	73
6.1	Does Titan do B2B?	74
6.2	Example: managing the supply chain	74
6.3	Example: building hubs	77
6.4	Partner-to-partner: airline and car rental	78
6.5	Government and scientific SOAs	80
	Example: coordinating government	80
	Example: integrating scientific data	81
6.6	The savvy manager cautions: you may still need proprietary standards	82
6.7	Summary	84
7	<i>SOA: improved business processes</i>	85
7.1	The “integration-centric” enterprise	87
	Data warehousing	89 ♦ Business activity monitoring (BAM) 90 ♦ Issues in integration-centric enterprises 91
7.2	The “process-centric” enterprise	93
7.3	The savvy manager cautions: process management is subjective	96
7.4	Summary	96
8	<i>Real-time operations</i>	98
8.1	What is your company’s time frame?	99
8.2	The goal of the real-time enterprise	100
8.3	Delivering real time with the SOA	101
8.4	Getting agile with a real-time SOA	103
8.5	The real-time virtual data warehouse	105
8.6	Setting business-level agreements	106
8.7	The savvy manager cautions: real time is an overused term	107
8.8	Summary	108
9	<i>Security in a loosely coupled environment</i>	109
9.1	Risks of loose coupling	110
	Machine to machine	111 ♦ Authorization and authentication 112 ♦ Privacy and integrity 113
	Flooding	114 ♦ Auditing 114

- 9.2 Layers of SOA security 115
  - Security policy and provisioning 115 ♦ Message-level security 115 ♦ Governance 116
- 9.3 Solutions to SOA security 116
  - SOAP message monitoring 116 ♦ SAML and federated authentication 117 ♦ Application proxy 119
  - Contract management 119 ♦ Certificates, keys, and encryption 120 ♦ XML encryption 121
  - Digital signatures 122
  - Replay attack protection and auditing 123
- 9.4 The savvy manager cautions: don't let security paralyze you 124
- 9.5 Summary 124

## 10 *Running an SOA* 126

- 10.1 Problems in the unmanaged SOA 126
  - Quality of service 127 ♦ Transaction monitoring and web service orchestration 127 ♦ Context sensitivity 128
  - Change management and version control 129
  - Load balancing and failover 130
- 10.2 Web service management solutions 131
  - SOAP monitoring 131 ♦ Quality of service and SLAs 132
  - Contracts 133 ♦ Caching 133 ♦ Orchestration 134
  - Context and priority 135 ♦ Change management 135
  - High availability 136
- 10.3 The savvy manager cautions: choosing an SOA management solution 137
- 10.4 Summary 137

## 11 *Assembling SOA networks* 139

- 11.1 Titan's potential SOA network 139
- 11.2 Managing the SOA network 140
  - Passing messages through the network 141
  - Managing change in the SOA network 143
- 11.3 Securing the SOA network 143
- 11.4 Finding the right solution 144
- 11.5 Using SOAP interception for SOA network management 145
- 11.6 XML VPNs 147
- 11.7 The savvy manager cautions: who's in charge? 149
- 11.8 Summary 150

- 12 *Utility computing* 151
  - 12.1 What Titan would gain from utility computing 151
  - 12.2 How open standards enable utility computing 154
  - 12.3 Utility computing in the SOA 156
  - 12.4 The savvy manager cautions: secure your utility computing 158
  - 12.5 Summary 158

## ***Part 2 Understanding the people and process of enterprise SOA 161***

- 13 *Exploring an SOA for Titan* 163
  - 13.1 Meeting with Titan's people 165
  - 13.2 Converting Titan's wish list into an SOA 168
    - Matching the wish list to services and processes 168
    - Translating the wish list into a service map 173
  - 13.3 Summary 176
- 14 *Achieving consensus at Titan* 178
  - 14.1 The second meeting 178
    - Replacing the front-end 179
    - Transitioning to best of breed 183
  - 14.2 Leadership 184
  - 14.3 The four P's 185
  - 14.4 Summary 186
- 15 *People: starting the training* 188
  - 15.1 Grouping for SOA training success 188
  - 15.2 Going beyond the basics 191
  - 15.3 Adding an "architects' council" 196
  - 15.4 Summary 196
- 16 *People: establishing best practices* 198
  - 16.1 Service discovery 199
    - Modeling the business 199 ♦ Process definition 200

16.2	Service creation, part I	203
	Rating the services	204 ♦ Migration 207
	Isolation	208 ♦ Flexibility and reusability 209
	Other factors	209 ♦ Overall evaluation 210
	Next steps	210
16.3	Summary	211
<i>17</i>	<i>People: establishing best practices</i>	<i>213</i>
17.1	Selecting a platform	213
17.2	Choosing a pilot project	214
17.3	Confronting a real architecture	217
17.4	Setting goals and achieving success	219
17.5	Measuring success	223
17.6	Summary	223
<i>18</i>	<i>Plan and proceed</i>	<i>225</i>
18.1	Forming an SOA plan	225
	Heavy lifting	226 ♦ Making big decisions 226
	Forming the target architecture	228
	Migration plan	229 ♦ Finalizing the plan 230
18.2	The fourth P: proceed	231
18.3	Facing disaster	232
18.4	Summary	233
	<i>Looking ahead</i>	<i>235</i>
	<i>index</i>	<i>237</i>
