Table of Contents

Introduction to J2EE xxvii

Chapter 1: Introducing J2EE 1

Need for Enterprise Programming 3

The J2EE Advantage 5

- Platform Independence 5
- Managed Objects 5
- Reusability 5
- Modularity 6

Enterprise Architecture Types 6

- Single-Tier Systems 6
- 2-Tier Architecture 7
- 3-Tier Architecture 10
- n-Tier Architecture 11

Architecture of J2EE 15

Introducing J2EE Components 16

- J2EE Runtime 16
- J2EE APIs 16

Introducing J2EE Containers 20

- Containers and Services 21

Types of J2EE Technologies 23

- Introducing J2EE Component Technologies 23
- Introducing J2EE Service Technologies 30
- Introducing J2EE Communication Technologies 31

Fitting Components 33

Summary 34

Chapter 2: Understanding EJB 37

EJB Fundamentals 39

- Enterprise JavaBeans and JavaBeans 40

EJB Architecture 40

EJB Server 40
EJB Client 41
EJB Container 41
The EJB Interfaces 41
Remote Interface 41
Home Interface 42
Implementation 42
EJB Roles 42
Enterprise Bean Provider 42
Application Assembler 42
Benefits and Limitations of Enterprise Beans 44
Benefits of Enterprise Beans 44
Limitations of Enterprise Beans 44
Database Access 45
Distributed Transactions and J2EE/EJB 45
Session Bean 45
Stateful Session Beans 46
Stateless Session Beans 48
Features of Session Beans 53
When to Use Session Beans 53
Developing Session Beans 54
Coding the Home Interface 54
Coding the Remote Interface 54
Coding the Enterprise Bean Class 55
Entity Beans 56
Features of Entity Beans 56
An Edge over Session Beans 57
Message-Driven Beans 58
Bean-Managed Persistence in Entity Beans 59
Container-Managed Persistence 65
Abstract Schema 65
Persistent Fields 66
Relationship Fields 66
Multiplicity in Container-Managed Relationships 66
Direction in Container-Managed Relationships 67
Bean Class 67
Home Interface 71
Remote Interface 72
Callback Methods 73
Comparing CMP and BMP Entity Beans 75
Deployment Descriptor 76
Overview 76
Bean Provider's Responsibilities 77

Application Assembler's Responsibility 78
Container Provider's Responsibilities 80
Caching 87
Finder Methods 89
Implementing Finder Methods 90
CMP and Finder Methods 91
BMP and Finder Methods 91
Sample Application 93
Problem Description 93
Distributed Deployment 95
Parts Developed by ABC.. 96
The Benefits Database 117
Packaging of Parts 117
Parts Developed at ABC Inc. 118
Deployment of EmployeeEJB 118
Payroll System 123
What's New in EJB 3.0 124
Using Annotations Instead of Deployment Descriptors 124
Callback Methods and Listener Classes 125
Interceptors 126
Dependency Injection 127
EntityBeans Made Easy 128
Security Annotations 128
Summary 130

Chapter 3: EJB Best Practices 131
When to Use Enterprise Beans 133
Case Study 133
Factors Affecting EJB 134
Deciding for EJB 134
Introducing Scheduling 135
Timer Service API 135
The Timer Interface 137
Entity Bean Timers 139
Stateless Session Bean Timers 140
Message-Driven Bean Timers 140
Problems with the Timer Service 140
What is Cron? 140
Improving the Timer Service 141
Message-Driven Bean Timers: Standard Configuration 143
Other Problems with Timer API 143
Introducing Transactions 144
What is a Transaction? 144

Transactions in Enterprise Beans....144
Transaction Attributes....145
Guidelines for Transaction....146
Guidelines for Transaction Attributes....146
BMP and CMP....147
Why use BMP with Entity EJBs?....147
Why use CMP?....149
EJB Integration....151
The EJB Runtime Environment....152
Creation of a Runtime Environment....153
Declaring Book's Remote Interface....154
Declaring Book's Home Interface....155
Implementing BookegBean....156
Compiling Book's Java Code....160
Prerequisites for Compiling....160
Deploying EJBs....161
Deployment Tools....162
EJB Performance Optimization....166
Overview of EJB....166
Common Tuning Practices in EJBs....166
Choosing Between EJB and Non-EJB....166
Choosing Between Local EJB and Remote EJB....167
Wrap Entity Beans with Session Bean....168
Reduce Method Calls with Coarse Granularity....169
Control Serialization in Remote EJBs....170
Cache EJBHome Object References....170
Control Transaction....171
Set Optimal Transaction Age....172
Using Clustering for Scalability....173
Tune Thread Count....173
Choosing Between HttpSession and Stateful Session Bean....173
Stateful Session Bean....173
HttpSession Object....174
Choosing an EJB Server....174
Tuning Stateless Session Beans....174
Stateless Session Bean Life-Cycle....175
Tuning Stateful Session Beans....177
Stateful Session Bean Life-Cycle....177
Tuning Entity Beans....179
Entity Bean Life-Cycle....179
Tuning Entity Beans Instance Pool Size....181
Tuning Entity Beans Instance Cache Size....182
Using setEntityContext() Method as Cache....182
Release Resources in unSetEntityContext() Method....182

Using Lazy Loading 182
Choosing Optimal Transaction Isolation Level 184
Choosing a Right Isolation Level for Your Program 184
Use CMP Instead of BMP 186
Use ejbHome() Methods for Global Operations 186
Using Connection Pool 186
Clustered EJBs 187
EJB Home Stubs 187
Stateless EJBs 187
Stateful EJBs 187
Entity EJBs 187
Message-Driven Beans 188
JMS as a Resource 188
JMS is Asynchronous 188
JMS Messaging Models: Publish-and-Subscribe and Point-to-Point 190
Publish-and-Subscribe 190
Point-to-Point 191
Which Messaging Model Should You Use? 191
Entity and Session Beans Should Not Receive Messages 191
Message-Driven Beans 193
The ReservationProcessor EJB 193
The ReservationProcessorBean Class 194
MessageDrivenBean Interface 196
MessageDrivenContext 197
MessageListener Interface 198
The onMessage() method: Workflow and Integration for B2B 198
Sending Messages From a Message-Driven Bean 200
XML Deployment Descriptor 200
The Life-Cycle of a Message-Driven Bean 202
The Method-Ready Pool 202
Transitioning to the Method-Ready Pool 203
Life in the Method-Ready Pool 203
Transitioning Out of the Method-Ready Pool: The Death of an MDB Instance 203
Summary 204

Chapter 4: Understanding Directory Services and JNDI 205
Introducing Naming and Directory Services 207
Naming Services 207
JNDI Naming 208
Directory Services 211
JNDI Directory 212
Introducing LDAP and JNDI 214
Introduction to LDAP 214
Introduction to JNDI 215

Understanding LDAP 221
LDAP Data 221
Why Use JNDI When We Have LDAP? 223
Installing JNDI 224
JNDI Service Providers 224
LDAP Operation 225
Standard LDAP Operations 225
Connecting to the LDAP Server with JNDI 226
Working with the LDAP Server 227
Performing JNDI Search 227
Searching on Attributes 232
Searching with Filters 233
Controlling Search Results 235
The COMPARE Operation 236
Adding Entries 240
Modifying an Entry 247
Summary 249

Chapter 5: Introducing RMI 251
Understanding the RMI Architecture 253
Architectural Overview 254
RMI Architecture Layers 255
Parameters in RMI 260
Working with RMI 262
Installation 262
Application Development with RMI 263
Advantages of Dynamic Code Loading 264
Remote Interfaces, Objects, and Methods 264
Steps for Developing an RMI System 265
Creating Distributed Applications Using RMI 268
Designing and Implementing the Application Components 268
Compiling Sources and Generating Stubs 269
Making Classes Network Accessible 269
Starting the Application 269
Building a Generic Compute Engine 269
Writing an RMI Server 270
Designing a Remote Interface 270
Implementing a Remote Interface 271
Declaring Remote Interfaces Being Implemented 273
Defining the Constructor 273
Providing Implementations for Each Remote Method 274
Passing Objects in RMI 274
Implementing the Server's Main Method 275
Creating and Installing a Security Manager 275

Making the Remote Object Available to Clients 275
Creating a Client Program 277
Compiling and Running the Example 280
Locating Remote Objects 286
Garbage Collection of Remote Objects 287
RMI over IIOP? 288
Before RMI-IIOP 288
The Best of both Worlds 289
Dual Export 290
Interoperability with CORBA 290
RMI-IIOP Design Policy 291
When should I use RMI-IIOP? 292
Writing Programs with RMI-IIOP 292
The Hello World Application 293
Summary 300

Chapter 6: JDBC and Database Programming 301
Introduction to JDBC 303
JDBC–ODBC 304
Simple Select 305
JDBC Installation 305
JDBC–ODBC Installation 306
Applet Considerations 306
Ways Around Limitations 306
JDBC Architecture 306
JDBC Basics 307
JDBC Drivers 308
Understanding the JDBC Driver 309
The JDBC Specification 310
JDBC Driver Types 310
JDBC Driver Features 313
The java.sql Package 316
Connection Management 316
Database Access 316
Data Types 317
Database Metadata 318
Exceptions and Warnings 319
Using DataSource Object to Make a Connection 319
JDBC Processes with Java.sql 321
Basic JDBC Steps 321
A Dynamic SQL Select Program 324
Statements Object 327
PreparedStatement 329
Callable Statement 333

The ResultSet ... 335
ResultSetMetaData ... 336
JDBC Processes with Javax.sql ... 337
Connection Pooling ... 338
Traditional Connection Pooling ... 338
Connection Pooling with javax.sql Package ... 341
Connection Pooling Implementation ... 342
Transactions ... 343
Transaction Boundaries and Auto-commit ... 343
Transaction Isolation Levels ... 344
Savepoints ... 345
Distributed Transaction ... 346
Infrastructure ... 347
XADataSource and XAConnection ... 348
XAResource ... 350
Transaction Management ... 351
Closing the Connection ... 352
Limitations of the XAResource Interface ... 353
Summary ... 353

Chapter 7: Introducing Web Containers ... 355
Understanding the HTTP Protocol ... 358
What is HTTP? ... 358
HTTP Responses ... 364
Introducing Web Applications and Web Containers ... 365
How Web Application Works ... 365
Web Components ... 366
Servlets and JSP Pages ... 369
Web Component Roles ... 369
Servlets ... 372
Web Application Life-Cycle ... 373
Structure/Modules of Web Application ... 373
Web Container ... 374
Types of Web Containers ... 375
Creating a Web Application ... 375
Applications with Basic JSP Pages and Servlets ... 376
Applications with Modular Components ... 376
EJB-Centric Applications ... 379
Model ... 379
View ... 379
Controller ... 380
Controller Components ... 380
Summary ... 382

Chapter 8: Understanding Servlet Programming 383
What's New in 2.4? 385
Upgraded Support for HTTP, J2SE, and J2EE 386
New ServletRequest Methods 386
RequestDispatcher Changes 386
Listeners 387
Session Changes 387
Miscellaneous Clarifications 388
Deprecations 388
Schema 388
What you don't see 389
Overview 389
Using Servlets 391
API 391
Features of the API 391
What Do Servlets Look Like? 392
Servlet and Environment State 392
Servlet Life-cycle 393
When Are Servlets Loaded? 393
Primary Servlet Methods 394
Security Features 394
HTML-Aware Servlets 395
HTTP-Specific Servlets 396
Performance Features 397
3-Tier Applications 398
Web Publishing System 398
Package javax.Servlet Description 399
Generic Servlet Interfaces and Classes 399
Servlet Configuration 402
Creating an HTML File 403
Creating a Servlet 403
Creating a Web Application 404
Deploying the Web Application 408
Running the Web Application 409
How the Application Works 409
Servlet Life-Cycle 411
The init() Method 412
The service() Method 414
Understanding Response and Request 416
The Role of Form Data 416
Reading Form Data from Servlets 416
Response Headers 418
Response Redirection 420

Response Redirection Translation Issues 423
Auto-Refresh/Wait Pages 424
HttpServletRequest 425
Headers 425
Form Data and Parameters 427
File Uploads 430
Using a File Upload API 439
Request Delegation and Request Scope 441
Summary 445

Chapter 9: Understanding Servlet Sessions 447
What is a Session? 449
Introducing Session Tracking 449
Session-Tracking Mechanism 450
Session Tracking and Java Servlet API 456
A History of Session Tracking 456
Session Creation and Tracking 457
The Session Tracking API 460
Session Life-cycle Event Handling 466
Session Attribute Event Handling 467
On-Line Store Using Session Tracking 469
Introducing ServletContext and Collaboration 479
ServletContext Life-Cycle Event Handling 485
Servlet Collaboration 486
Collaboration Through the System Properties List 486
Collaboration Through a Shared Object 490
Collaboration Through Inheritance 498
Summary 500

Chapter 10: Understanding of JSP and JSTL 501
Section A: Understanding JavaServer Pages 503
Introducing JSP Technology 503
Introducing JSP 2 504
Understanding the Page Life-Cycle 504
JSP Documents 506
JSP Document Syntax 507
A Simple JSP Document 508
HTTP 509
HttpJspPage Interface 509
Introducing JSP Syntax and Usage 511
JSP Elements 511
Directives 512
Actions 518

Available Object Scope 536
Implicit Objects 537
Scripting Elements 539
Comments 540
The JSP 2 Expression Language 540
Accessing Variables 542
Functions 544
Implicit Objects Available in the EL 545
Automatic Type Conversion 546
Default Values 547
Handling Errors 547
Internationalization of JSP Pages 548
Debugging 550
Performance 550
Using JSP Best Practices 552
JSP Tag Extensions 556
Introduction 556
Goals 557
Overview 557
Classic Tag Handlers 558
Simple Examples of Classic Tag Handlers 558
SimpleTag Handlers 560
Simple Examples of SimpleTag Handlers 561
Attributes with Dynamic Names 562
Event Listeners 562
Tag Libraries 562
Packaged Tag Libraries 562
Location of Java Classes 562
Tag Library directive 562
The Tag Library Descriptor 563
Identifying Tag Library Descriptors 563
TLD Resource Path 563
Determining the TLD Resource Path 564
Tag and Tag Library Extension Elements 566
Validation 569
Translation-Time Mechanisms 569
Request-Time Errors 570
Conventions and Other Issues 570
Tag Extension API 571
JSP Classic Tag Handlers 571
Tag Handler 571
The Tag Interface 573
JspTag Interface 577
IterationTag Interface 577

TagSupport Class 580
Tag Handlers that want Access to their Body Content 583
BodyContent Class 583
BodyTag Interface 585
BodyTagSupport Class 587
Dynamic Attributes 589
DynamicAttributes Interface 590
Annotated Tag Handler Management Example 590
Cooperating Actions 594
PageContext 594
The Runtime Stack 594
SimpleTag Handlers 594
Life-Cycle of SimpleTag Handlers 595
SimpleTag Interface 596
SimpleTagSupport Class 598
TagAdapter Class 600
JSP Fragments 601
Creation of a JSP Fragment 602
Invocation of a JSP Fragment 602
JspFragment Class 603
Examples of SimpleTag Handler 604
Sample Source Files 604
Sample Generated Files 605
Translation-time Classes 610
Tag mapping, Tag name 610
Scripting Variables 611
Validation 611
TagLibraryInfo Class 612
TagInfo Class 615
TagFileInfo Class 619
TagAttributeInfo Class 620
PageData Class 622
TagLibraryValidator Class 622
ValidationMessage Class 624
TagExtraInfo Class 625
TagData Class 626
VariableInfo Class 628
TagVariableInfo Class 631
FunctionInfo Class 632
Section B: Understanding JavaServer Pages Standard Tag Library (JSTL) 633
Using the JSTL 633
Why a JSP Standard Tag Library? 633
Example JSP Pages 633
Getting a JSTL Functional Overview 636

Functional Overview 636
Using the Expression Language 637
Implicit Objects Available in the EL 638
Automatic Type Conversion 638
Working with the Core Actions 639
Internationalization and Formatting Actions 641
Using the SQL Actions 642
Tags in JSTL 643
Tag Collaboration 644
Core Tag Library 645
Variable Support Tags 645
Flow Control Tags 646
Conditional Tags 646
Iterator Tags 647
URL Tags 648
Miscellaneous Tags 649
XML Tag Library 650
Core Tags 651
Flow Control Tags 652
Transformation Tags 653
Working with XML 653
Rules for Integration 653
Core Actions 655
Working with the XML Core Actions 659
Capabilities 659
Using XML Transformation Actions 662
Transformations 662
JSP Examples 665
Using Internationalization Actions 668
Setting the Locale 668
Messaging Tags 668
The setBundle and bundle Tags 669
The message Tag 669
Formatting Tags 669
Internationalization (I18N) Actions 669
Using <fmt:message> Action 670
Working with Localization Context 671
Determinining the Resource Bundle for an I18N Localization Context 672
Configuration Settings 681
Setting Preferred Locales 684
Time Zone 688
Configuration Settings 698
SQL Actions 698
Area Function Tags Prefix 699

SQL Actions in Relation to JSTL 703
Working with the Data Source 703
SQL Statement Parameters 705
Database Access 706
Obtaining and Releasing a Connection 708
Using Interfaces and Classes 714
Configuration Settings 716
Using Custom Actions in JSP 717
What Are Custom Actions? 717
What Are JSP Custom Tags? 718
Understanding Custom Actions Life-Cycles 719
Using Classic Custom Action 722
Defining TLD 726
Understanding Tag Files 727
Using the Advanced JSP 2.0 Features 731
Handling Dynamic Attributes in tag Files 731
Exporting Variables from a tag File to a JSP Page 733
Using Attributes to Provide Names for Variables 736
Invoking JSP Fragments from Tag Files 737
Revisiting JSP and JSTL 745
Using Scripting 746
Disabling Scripting 746
Scriptlets 747
Expressions 748
Programming Tags that Accept Scripting Elements 748
Using a Tag Library Validators Class 753
Summary 755

Chapter 11: Understanding Struts 1.1 and JSF1.2 757
Getting Started with Struts 1.1 759
Why Struts? 760
Installing Struts 761
Building Struts From Source 764
How do Struts Work? 765
Line Benefits of MVC 766
Building your Pages with Struts 768
HelloWorld Application 769
Hello World! Application Requirements 770
Introduction of JSF 1.2 783
The Basic Idea Behind JSF 784
Notable Features of JSF 785
Elements of JSF 786
JSF Life-Cycle with a PhaseListener 790
Understanding JavaServer Faces 796

Converting a Struts Application to JSF 807
Summary 808

Chapter 12: Enterprise Java Web Services 809
An Analogy to Web Services Program 811
Programming Model 812
Constructing a System 814
Type Systems 814
Message Interchange 815
Finding Web Services 817
Systems to Frameworks 818
Web Services in J2EE 819
The Role of XML and the Java Platform 820
Java APIs for XML 823
JAXP 824
The SAX API 824
The DOM API 826
XML Namespaces 827
The XSLT API 828
JAX-RPC 830
Using JAX-RPC 831
Other J2EE Web Services 832
Creating a Web Service 835
JAXM 837
Populating a Message 840
JAXR 842
Taking a Sample Scenario 843
Working with SOAP Messages 845
Inside SOAP 846
When Good SOAP Requests go Bad 848
SOAP and HTTP 850
Java Objects to a SOAP Web Service 853
Java Interface as Service Contract 854
WSDL and WSDD 855
Testing an Axis Web Service 860
Secure Web Services 862
Implementing Web Services 864
Axis Power 865
The Web Service Deployment Descriptor 867
What's in a WSDL? 868
Overview to Create a Simple Web Service 876
Generating WSDL 876
Generating Stubs from WSTK WSDL Files 881
Smart Web Services 881

Smart Service Examples 882
Making Web Services Smarter 883
Web Services Processing Model 886
Processing a Service Request 887
Standards Backplane 887
Web Services Developer Model 890
Capturing Context Information 892
Secure Web Services 893
What is XML Encryption? 893
SAML 894
SAML Assertions 896
SAML Request–Response Protocol 897
WS-Security 898
ebXML Message Service 898
How the Initiatives Work Together 899
Why Identity Management Architecture? 899
Ensure Secure Transmissions 902
Summary 902

Chapter 13: Understanding XML Documents 903
Introduction to XML 905
Tags and Attributes 906
Empty Tags 906
Comments in XML Files 907
The XML Prolog 907
Importance of XML 908
Plain Text 908
Data Identification 908
Stylability 908
Inline Reusability 908
Linkability 909
Easy Processability 909
Hierarchical 909
Usage of XML 909
Working with the XML Core Actions 911
Writing a Simple XML File 911
Writing Processing Instructions 913
Substituting and Inserting Text 914
Handling Special Characters 914
Handling Text with XML-Style Syntax 915
Creating a Document Type Definition 916
Basic DTD Definitions 916
Limitations of DTDs 917
Referencing the DTD 918

Documents and Data 919
Defining Attributes and Entities in the DTD 919
Defining Attributes in the DTD 919
Defining Entities in the DTD 921
Additional Useful Entities 922
Referencing External Entities 922
Referencing Binary Entities 923
Defining Parameter Entities and Conditional Sections 924
Creating and Referencing a Parameter Entity 924
Conditional Sections 925
Resolving a Naming Conflict 926
Using Namespaces 927
Defining a Namespace in a DTD 927
Referencing a Namespace 927
Defining a Namespace Prefix 928
Java API for XML Processing 929
The JAXP APIs 930
An Overview of the Packages 930
The Document Object Model APIs 931
The Simple API for XML APIs 932
The Extensible Stylesheet Language Transformations APIs 934
Using the JAXP Libraries 935
Using the Document Object Model 936
When to Use DOM 936
A Simpler Model 936
Nodes in DOM 937
Reading XML Data into a DOM 938
Creating the Program 938
Writing Out a DOM as an XML File 941
Simple API for XML 945
When to Use SAX 946
Echoing an XML File with the SAX Parser 946
Compiling and Running the Program 952
Checking the Output 953
Identifying the Events 953
Compressing the Output 955
Adding Additional Event Handlers 957
Identifying the Document's Location 957
Handling Processing Instructions 958
Generating XML from an Arbitrary Data Structure 959
Creating a Simple File 960
Creating a Simple Parser 960
Modifying the Parser to Generate SAX Events 962
Using the Parser as a SAXSource 966

Doing the Conversion 968
Summary 968

Chapter 14: Understanding JMX 969
What is JMX Technology? 972
Why Use JMX Technology? 972
JMX Support 973
JMX Architecture 974
Instrumentation Level 976
The Protocol Level 976
The Distributed Services Level 976
JMX Instrumentation 976
Instrumenting Resources for JMX Technology 977
Manageable Resources 977
JVM Instrumentation 977
Using JMX Agents 977
Protocol Level 979
MBean Instrumentation 980
Public Concrete Classes 981
Standard MBean 982
DynamicMBean 985
Generic Operation Invoker 993
Running the DynamicMBean Example 994
Comparison with the Simple Example 994
DynamicMBean Execution Time 995
The MBean Server in a Minimal Agent 996
The JMX Agents 1001
What is an Agent? 1002
Importance of Agents 1002
An Agent Architecture 1003
Using JMX with the EJB Platform 1005
An EJB Review 1005
The EJB Model 1005
Combining JMX with EJBs 1006
Accessing Enterprise data with JMX 1006
Creating Application for Managing User Logins 1007
Sample Case 1007
The JMX solution 1008
Developing the Login Monitor 1008
Constructing the User Information Entity Bean 1008
Constructing User Information Management MBean 1011
Running the Login Monitor 1015

Summary ... 1017

Chapter 15: Working with Filters in Web Applications ... 1019

How do Filters Work ... 1021

Uses of Filters ... 1022

Configuring Filters ... 1022

Writing a Filter ... 1023

FilterConfig Interface ... 1024

FilterChain Interface ... 1025

Setting Up Development Environment ... 1026

Writing a Generic Filter ... 1026

Writing Your First Filter ... 1029

Creating A JSP Page to Test the Filter ... 1030

Configuring Your Filter ... 1031

Testing Your Filter ... 1031

Build a Simple Filter that uses an Initializing Parameter ... 1032

Creating the MsgFilter ... 1032

Creating a JSP Page to Test the Filter ... 1033

Configuring your Filter ... 1033

Testing your Filter ... 1034

Manipulating the Response ... 1035

Creating the FilterServletOutputStream ... 1036

Creating the GenericResponseWrapper ... 1037

Writing the Filter ... 1040

Creating a JSP Page to Test the Filter ... 1041

Configuring Your Filter ... 1041

Testing Your Filter ... 1042

Manipulating a Multimedia Response ... 1042

Writing the Filter ... 1043

Setup an Image Resource to Test the Filter on ... 1046

Configuring Your Filter ... 1046

Testing Your Filter ... 1047

Web Application Deployment Descriptors ... 1047

Tools for Editing Deployment Descriptors ... 1047

Writing the web.xml Deployment Descriptor ... 1047

The Sample File—web.xml ... 1055

Summary ... 1056

Chapter 16: Web Deployment and Authentication ... 1057

Understanding Web Application Structure ... 1059

What can be Packaged? ... 1060

Packaging Roles....1061
Tool Provider....1062
Deployer....1063
System Administrator....1063
The Limitations of Packaging....1064
Understanding Class Loading Schemes....1065
The Pre-EJB 2.0 Option....1066
The Post-EJB 2.0 Option....1067
An Ambiguity in the J2EE Specification....1067
Configuring J2EE Packages....1068
The Enterprise Application Development Process....1068
Sample Application....1068
Deployment....1071
Deployment Tools....1072
The Structure of a J2EE Package....1077
Deploying Web Application....1078
Example....1079
Optional Deployment Descriptor Tags....1081
Issues With the Ordering of Modules....1082
Issues With Dependency Packages....1083
Understanding the CLASSPATH....1084
Dependency Example....1085
The Impact of Dependency Libraries....1087
Deployment Tools....1087
Creating a Simple Web Service and Client with JAX-RPC....1092
Building the Service....1093
Packaging and Deploying the Service....1094
Securing Web Applications....1098
Security Threats and Mechanisms....1099
Protection Domains....1100
Authentication Mechanisms....1102
EJB-Tier Authentication....1103
Auto-Registration....1105
Authorization....1105
Protecting Messages....1111
Auditing....1113
XML and Web Services Security....1114
Understanding Login Authentication....1114
Using Form-Based Authentication in an Example....1118
Adding Authorized Users....1119
Creating a Web Client for Form-Based Authentication....1119
Creating the Login Form and Error Page....1120

Specifying Security Elements for Form-Based Authentication 1120
Building, Packaging, Deploying, and Running the Form-Based Authentication Example 1121
Building the Form-Based Authentication Example....1121
Packaging the Web Application 1121
Adding Security to the Form-Based Example 1122
Deploying the Web Application....1123
Running the Web Application 1123
Using Authentication with SSL 1124
Basic Authentication with JAX-RPC Example 1124
Setting Security Properties in the Client Code 1125
Building, Packaging, Deploying, and Running the Basic Authentication Example 1126
Building the Basic Authentication Service....1126
Packaging the Basic Authentication Service....1126
Adding Basic Authentication Using deploytool....1128
Deploying the Basic Authentication Service 1129
Building and Running the Basic Authentication Client 1129
Client-Certificate Authentication over HTTP/SSL with JAX-RPC Example.... 1130
Keystores and Trust-Stores in the Mutual Authentication Example 1130
Modifying the Build Properties 1131
Setting Security Properties in the Client Code 1131
Enabling Client-Certificate Authentication for the Mutual Authentication Example 1133
Building, Packaging, Deploying, and Running the Mutual Authentication Example 1133
Building the Mutual Authentication Example....1133
Packaging the Mutual Authentication Example....1133
Adding Client-Certificate Authentication Using deploytool 1135
Deploying the Mutual Authentication Example....1135
Running the Mutual Authentication Example....1135
Summary.... 1136

Appendix A: Java Encoding Schemes 1139

Appendix B: XML Standards 1141

Appendix C: HTTP For You 1143

Appendix D: Installing BEA WebLogic....1145
Folders Created During Installation.... 1145
System Requirements for WebLogic 1146
Installing WebLogic (Graphical Mode).... 1146

Appendix E: Java EE 5 Preview 1151
API (s) Introduced 1152
Resources Available 1155
Integrated Development Environment 1156

Appendix F: What's there in JavaServer Pages 2.1? 1157
Features of JSP 2.1 1157
Resources Available 1158
Features of New Faces 1159

Index 1161

What's on the CD-ROM 1168
