*about this book* xxii  
*about the title* xxvii  
*about the cover illustration* xxviii

## **PART 1 STRUTS 2: A BRAND NEW FRAMEWORK .....1**

---

- 1** *Struts 2: the modern web application framework* 3
- 1.1 Web applications: a quick study 4
    - Using the Web to build applications* 4 ■ *Examining the technology stack* 4 ■ *Surveying the domain* 8
  - 1.2 Frameworks for web applications 9
    - What's a framework?* 10 ■ *Why use a framework?* 10
  - 1.3 The Struts 2 framework 11
    - A brief history* 11 ■ *Struts 2 from 30,000 feet: the MVC pattern* 12 ■ *How Struts 2 works* 15
  - 1.4 Summary 18

- 2** *Saying hello to Struts 2* 20
- 2.1 Declarative architecture 21
    - Two kinds of configuration* 21 ■ *Two mechanisms for declaring your architecture* 22 ■ *Intelligent defaults* 25
  - 2.2 A quick hello 25
    - Deploying the sample application* 26 ■ *Exploring the HelloWorld application* 30
  - 2.3 HelloWorld using annotations 36
  - 2.4 Summary 38

## **PART 2 CORE CONCEPTS: ACTIONS, INTERCEPTORS, AND TYPE CONVERSION .....41**

---

- 3** *Working with Struts 2 actions* 43
- 3.1 Introducing Struts 2 actions 44
    - What does an action do?* 44
  - 3.2 Packaging your actions 46
    - The Struts 2 Portfolio application* 47 ■ *Organizing your packages* 47 ■ *Using the components of the struts-default package* 50
  - 3.3 Implementing actions 52
    - The optional Action interface* 52 ■ *The ActionSupport class* 54
  - 3.4 Transferring data onto objects 62
    - Object-backed JavaBeans properties* 62 ■ *ModelDriven actions* 64
    - Last words on using domain objects for data transfer* 67
  - 3.5 File uploading: a case study 67
    - Getting built-in support via the struts-default package* 67 ■ *What does the fileUpload interceptor do?* 68 ■ *Looking at the Struts 2 Portfolio example code* 69
  - 3.6 Summary 72
- 4** *Adding workflow with interceptors* 74
- 4.1 Why intercept requests? 75
    - Cleaning up the MVC* 75 ■ *Reaping the benefits* 77
    - Developing interceptors* 78
  - 4.2 Interceptors in action 78
    - The guy in charge: ActionInvocation* 78 ■ *How the interceptors fire* 79

- 4.3 Surveying the built-in Struts 2 interceptors 81
  - Utility interceptors* 82 ■ *Data transfer interceptors* 82
  - Workflow interceptors* 84 ■ *Miscellaneous interceptors* 88
  - Built-in stacks* 90
- 4.4 Declaring interceptors 90
  - Declaring individual interceptors and interceptor stacks* 90
  - Mapping interceptors to actions* 93 ■ *Setting and overriding parameters* 94
- 4.5 Building your own interceptor 95
  - Implementing the Interceptor interface* 95 ■ *Building the AuthenticationInterceptor* 95
- 4.6 Summary 99

## 5 **Data transfer: OGNL and type conversion** 101

- 5.1 Data transfer and type conversion: common tasks of the web application domain 102
- 5.2 OGNL and Struts 2 103
  - What OGNL does* 103 ■ *How OGNL fits into the framework* 105
- 5.3 Built-in type converters 108
  - Out-of-the-box conversions* 108 ■ *Mapping form field names to properties with OGNL expressions* 109
- 5.4 Customizing type conversion 122
  - Implementing a type converter* 122 ■ *Converting between Strings and Circles* 123 ■ *Configuring the framework to use our converter* 124
- 5.5 Summary 126

---

## PART 3 BUILDING THE VIEW: TAGS AND RESULTS..... 129

### 6 **Building a view: tags** 131

- 6.1 Getting started 132
  - The ActionContext and OGNL* 132 ■ *The ValueStack: a virtual object* 135
- 6.2 An overview of Struts tags 137
  - The Struts 2 tag API syntax* 138 ■ *Using OGNL to set attributes on tags* 139

- 6.3 Data tags 142
  - The property tag* 142 ■ *The set tag* 143 ■ *The push tag* 144 ■ *The bean tag* 145 ■ *The action tag* 148
- 6.4 Control tags 150
  - The iterator tag* 150 ■ *The if and else tags* 151
- 6.5 Miscellaneous tags 152
  - The include tag* 152 ■ *The URL tag* 153 ■ *The i18n and text tags* 154 ■ *The param tag* 156
- 6.6 Using JSTL and other native tags 156
- 6.7 A brief primer for the OGNL expression language 157
  - What is OGNL?* 157 ■ *Expression language features commonly used in Struts 2* 157 ■ *Advanced expression language features* 163
- 6.8 Summary 165

## 7 *UI component tags* 167

- 7.1 Why we need UI component tags 168
  - More than just form elements* 168
- 7.2 Tags, templates, and themes 174
  - Tags* 175 ■ *Templates* 176 ■ *Themes* 176
- 7.3 UI Component tag reference 178
  - Common attributes* 178 ■ *Simple components* 180 ■ *Collection-backed components* 190 ■ *Bonus components* 198
- 7.4 Summary 201

## 8 *Results in detail* 202

- 8.1 Life after the action 203
  - Beyond the page: how to use custom results to build Ajax applications with Struts 2* 204 ■ *Implementing a JSON result type* 205
- 8.2 Commonly used result types 213
  - The RequestDispatcher, a.k.a. dispatcher* 213 ■ *The ServletRedirectResult, a.k.a. redirect* 219 ■ *The ServletActionRedirectResult, a.k.a. redirectAction* 222
- 8.3 JSP alternatives 223
  - VelocityResult, a.k.a. velocity* 224 ■ *FreemarkerResult, a.k.a. freemarker* 225
- 8.4 Global results 227
- 8.5 Summary 228

## PART 4 IMPROVING YOUR APPLICATION ..... 229

---

### 9 *Integrating with Spring and Hibernate/JPA* 231

- 9.1 Why use Spring with Struts 2? 232
  - What can dependency injection do for me?* 232
  - How Spring manages objects and injects dependencies* 235
  - Using interfaces to hide implementations* 236
- 9.2 Adding Spring to Struts 2 238
  - Letting Spring manage the creation of actions, interceptors, and results* 239
  - Leveraging autowiring to inject dependencies into actions, interceptors, and results* 242
- 9.3 Why use the Java Persistence API with Struts 2? 244
  - Setting your project up for JPA with Hibernate* 245
  - Coding Spring-managed JPA* 249
- 9.4 Summary 253

### 10 *Exploring the validation framework* 255

- 10.1 Getting familiar with the validation framework 256
  - The validation framework architecture* 256
  - The validation framework in the Struts 2 workflow* 258
- 10.2 Wiring your actions for validation 261
  - Declaring your validation metadata with ActionClass-validations.xml* 262
  - Surveying the built-in validators* 265
- 10.3 Writing a custom validator 267
  - A custom validator to check password strength* 267
  - Using our custom validator* 269
- 10.4 Validation framework advanced topics 271
  - Validating at the domain object level* 271
  - Using validation context to refine your validations* 274
  - Validation inheritance* 277
  - Short-circuiting validations* 277
  - Using annotations to declare your validations* 278
- 10.5 Summary 280

### 11 *Understanding internationalization* 282

- 11.1 The Struts 2 framework and Java i18n 283
  - Retrieving localized text with ResourceBundle and Locale* 284
  - How Struts 2 can ease the pain of i18n* 286
- 11.2 A Struts 2 i18n demo 287
  - A quick demo of Struts 2 i18n* 287
  - A quick look behind the scenes* 290

- 11.3 Struts 2 i18n: the details 291
  - Struts 2 default TextProvider ResourceBundle location algorithm* 291
  - Retrieving message texts from your bundles* 295 ■ *Using the i18n tag to specify a bundle* 299 ■ *Parameterizing your localized texts* 299 ■ *Formatting dates and numbers* 301
- 11.4 Overriding the framework's default locale determination 302
  - Letting the user interactively set the locale* 302 ■ *Programmatically setting the locale* 305
- 11.5 Summary 305

## PART 5 ADVANCED TOPICS AND BEST PRACTICES ..... 307

---

### 12 *Extending Struts 2 with plug-ins* 309

- 12.1 Plug-in overview 310
  - How to find plug-ins* 311
- 12.2 Common plug-ins 311
  - SiteMesh* 311 ■ *Tiles* 313 ■ *JFreeChart* 315
- 12.3 Internal component system 316
  - Beans* 317 ■ *Constants* 318 ■ *Injection* 318 ■ *Struts internal extension points* 319
- 12.4 Writing a breadcrumb plug-in 321
- 12.5 Summary 325

### 13 *Best practices* 326

- 13.1 Setting up your environment 327
  - Setting up your IDE* 327 ■ *Reloading resources* 328
- 13.2 Unit-testing your actions 328
  - The advantage of IoC for testing* 329 ■ *JUnit and the tests* 329 ■ *Testing validation.xml files* 332
- 13.3 Maximizing reuse 332
  - Componentization with the component tag* 333 ■ *Leveraging the templated tags* 334 ■ *Connecting the UI-to-object dots* 335
- 13.4 Advanced UI tag usage 336
  - Overriding existing templates* 336 ■ *Writing custom templates* 337 ■ *Writing custom themes* 337
- 13.5 Summary 338

## 14 *Migration from Struts Classic* 339

- 14.1 Translating Struts Classic knowledge 340
  - Actions* 340 ■ *What happened to ActionForms?* 341
  - Switching tag libraries* 343 ■ *Breaking up message resources* 345
- 14.2 Converting by piecemeal 346
  - Eating an elephant a piece at a time* 347 ■ *The action mappings* 349 ■ *Where the action meets the form* 350
  - Turn the page* 352 ■ *No speak English* 354 ■ *The data police* 355 ■ *Can we just get along?* 357
- 14.3 Summary 359

## 15 *Advanced topics* 360

- 15.1 Advanced action usage 361
  - Alternative method invocation* 361
- 15.2 Dynamic method invocation 362
  - Wildcard method selection* 362 ■ *Dynamic workflows* 365
- 15.3 Using tokens to prevent duplicate form submits 366
  - Using the <:token/> form tag* 366 ■ *Exceptions to the token interceptor rule* 368
- 15.4 Displaying wait pages automatically 369
  - When users are impatient* 369
- 15.5 A single action for CRUD operations 371
  - That CRUD* 371 ■ *Interceptors and interfaces* 372 ■ *Connecting the parts* 377
- 15.6 Tiles and Struts 2 379
  - Taking care of the website look and feel* 379
  - Configuring the interplay* 380 ■ *Using the declarative architecture* 383 ■ *Preparing web page content with a tiles controller* 385
- 15.7 Summary 386
  - index* 387
